

## Learning about research strategies

Some things we learned about research:

Republicans see health-care as an attack on the constitution. - Socialist.

Republicans want everyone to pay more taxes

- That not every website is reliable

- Use fewer words but more concise words for key words

- Sometimes it's not always the first results that are reliable

- Sometimes the non bias information doesn't have much of an impact & is boring.

- When you want to know if a source is reliable you can type the webpage into easybib

## Learning about research strategies

Some things we learned about research:

→ Don't trust solely one side.

→ Wikipedia is a good starting point but not necessarily reliable information.

↳ others are too hard + complicated to use.

→ Resort to google and wikipedia you can find what you want easier. More efficient.

→ Don't trust the first link that pops up.

→ There is multiple tabs on websites that you can search on and find information.

→ Some websites you have to subscribe too.

→ Some websites just don't contain the information we were looking for or not specific enough.  
↳ have views rather than fact or information.

## Learning about research strategies

Some things we learned about research:

- Base your findings on your question you need to keep going back to your question to stay in the right direction
- Be careful with your sources because anyone can put info on Wiki site.  
example
- Not all sources can be trusted and you should always double check your information with other websites / books.
- Watching videos can also be useful in finding information; they physically gives us a different perspective.

## Learning about research strategies

Some things we learned about research:

- You have to have a very specific search phrase to get the best results in a search engine.
- If you don't get the desired results, you have to try and rephrase your wording.
- If one search engine doesn't produce results, try one that will work or one that you are more familiar with.
- When using a new search engine try and figure out how it works, as it might not work or produce the desired results.

Erin Hachey      Rebekah Lockhart      Jessica Williams

## Learning about research strategies

Some things we learned about research:

- Harriet Irving Library is more useful, past events not so much current events.
- Google works well within a wide scope, start with generalized search topic then move onto more specialized search terms after that.
- Google Scholar can be a productive resource to use when researching certain topics, so don't write it and other websites like it off because even if it doesn't work the first time it might work the next.
